Placing Your Order...

You can mail this form, with payment, to our office (address on front) or drop it in our mail slot. We'll give you a call when it is ready for pick up. Sorry, we do not have the capacity to ship orders.

Window Measurements and Planning

Before you purchase your reusable window kits, it's a good idea to take stock of the needs in your home.

You may be able to save money by purchasing an extra large kit and using it for two smaller windows, or prioritize which windows you want to cover first. Window kits work best when surfaces are clean and dry. You want to be sure any moisture problems are addressed before weatherizing your windows.

We strongly recommend planning the size of your plastic sheets to be an additional 2-3 inches on all sides. Remember, you will be adhering the frame pieces along the window frame or molding, not on the edge of the glass. If you measure only the window glass, then you will end up without enough plastic.

Another thing to keep in mind is that you may remove the plastic to wash it, and re-hang later. If the plastic sheeting is cut too close to the frame pieces, you will have an incredibly difficult time re-hanging the plastic. Plus, it gives you room to make last-minute adjustments. *Tip sheets are available on our website, or join us at one of our free workshops! Oversize Window/Patio Door Kit

For windows/doors LARGER THAN the Extra-Large Kit (72" x 82") only

You can weatherize a patio door pretty much like a large window, except for the bottom. The frame pieces do not work well on the bottom of a patio door. For the bottom, just make the plastic extra long (about 4-6"), to allow for you to place a "door snake" or other weight on the bottom section. Plan for an additional 3" on the top and two sides, and 6" on the bottom. Once you have your measurement, then use the worksheet below.

Oversized Window/Patio Door custom kit \$0.47 per square foot

Includes plastic sheeting, self-adhesive tracking, and locking strips (plastic spline)

Example: 8.5' x 10' oversized window = 85 sq.ft.

Price: 85 sq. ft. x \$0.47/sq ft = **\$39.95**

Note: The roll of plastic is 76" long (6'4"), so if both dimensions are over 76," we will joint two pieces of plastic sheeting with clear polyvinyl tape.

Cost Calculation Worksheet

Window #1: _____ ft h x _____ ft w = _____ sq.ft.

Kit #1 price: _____ sq.ft. x \$0.47 sq.ft. = \$

Window #2: _____ ft h x _____ ft w = _____ sq.ft.

Kit #2 price: _____ sq.ft. x \$0.47 sq.ft. = \$
